Industrials		5.1%
Consumer Discretionary		4.9%
Communication Services		4.2%
Real Estate		3.4%
Energy		2.7%

Portfolio Highlights — May 2026

- ◆ The Strait of Hormuz crisis defined market direction, producing a sharp drawdown followed by an equally sharp recovery to near-record highs.
- ◆ Emerging markets outperformed developed markets globally, and the portfolio's EM allocation (EEM, EWZ, EWT, MCHI) captured this rotation effectively.
- ◆ Polish equities (EPOL) were the single largest contributor at the position level, supported by EU defence spending acceleration, NATO commitment uplift, and EUR strength.
- ◆ Brazil (EWZ) and Taiwan (EWT) added further alpha through Selic rate cuts and TSMC-driven semiconductor demand respectively.
- ◆ European exposure remained the principal area of weakness, reflecting the region's energy vulnerability and limited technology participation.
- ◆ The portfolio's diversified construction allowed both defensive hedges and growth-oriented positions to contribute simultaneously.
